1 Practical 01

1.1 Aim: Write a program to compute the following for a given a network: (i) number of edges, (ii) number of nodes; (iii) degree of node; (iv) node with lowest degree; (v) the adjacency list; (vi) matrix of the graph.

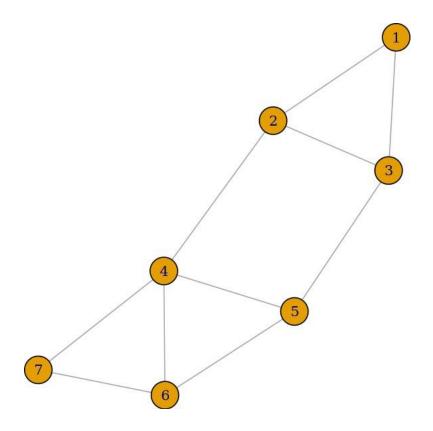

```
[1]: library(igraph)

Attaching package: 'igraph'

The following objects are masked from 'package:stats':
    decompose, spectrum

The following object is masked from 'package:base':
    union

[2]: g <- graph. formula(1-2, 1-3, 2-3, 2-4, 3-5, 4-5, 4-6, 4-7, 5-6, 6-7)
[3]: plot(g)</pre>
```

1.1.1 1)no of edges

[4]: ecount(g)

10

1.1.2 2)no of nodes

[5]: vcount(g)

7

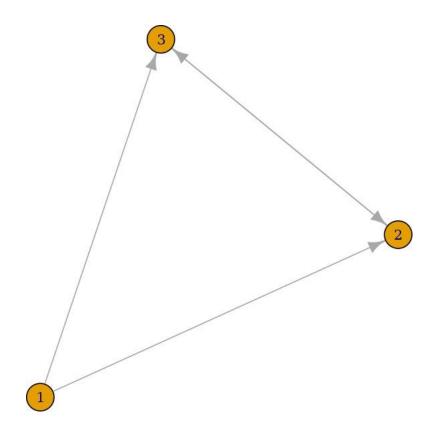

1.1.3 3)Degree Of nodes

[6]: degree(g)

1 2 **2** 3 **3** 3 **4** 4 **5** 3 **6** 3 **7** 2

[7]: dg <- graph. formula(1-+2, 1-+3, 2++3)

[8]: plot(dg)

[9]: degree(dg, mode="in")

1 02 23

```
[10]: degree(dg, mode="out")
     1
                           2 2
                                                  13
                                                                         1
     1.1.4 4) a) Node with lowest degree
[11]: V(dg) $name[degree(dg) ==min(degree(dg))]
     '1'
     1.1.5 4) b) Node with lowest degree
[12]: V(dg) $name[degree(dg)==max(degree(dg))]
     1. '2' 2. '3'
     1.1.6 5) To find neighbours / adjacency list:
      neighbors (g, 5)
[13]:
     + 3/7 vertices, named, from 881bcb9:
      [1] 3 4 6
      get.adjlist(dg)
[14]:
     $`1`
     + 2/3 vertices, named, from d90acba:
     [1] 2 3
     $`2`
     + 3/3 vertices, named, from d90acba:
     \lceil 1 \rceil \ 1 \ 3 \ 3
     $`3`
     + 3/3 vertices, named, from d90acba:
      \lceil 1 \rceil \ 1 \ 2 \ 2
     1.1.7 6)Adjacency Matrix
      get. adjacency (g)
[15]:
     7 x 7 sparse Matrix of class "dgCMatrix"
        1 2 3 4 5 6 7
      1.11....
     21.11...
     3 1 1 . . 1 . .
     4.1..11
     5..11.1.
```

```
6 . . . 1 1 . 1
7 . . . 1 . 1 .
```

2 Practical 02

2.1 Aim:

Perform following tasks:

- (i) View data collection forms and/or import onemode/two-mode datasets;
- (ii) Basic Networks matrices transformations

[1]: library(igraph)

Attaching package: 'igraph'

The following objects are masked from 'package:stats':

decompose, spectrum

The following object is masked from 'package:base':

union

- [2]: nodes <- read.csv("/kaggle/input/network-analysis-data-from-various-sources/

 ∴InputFileNodes.csv", header=T, , as.is=T)
- [3]: head (nodes)

```

4 Practical 04

4.1 Aim:

For a given network find the following: (i) Length of the shortest path from a given node to ano

```
[1]: library(igraph)

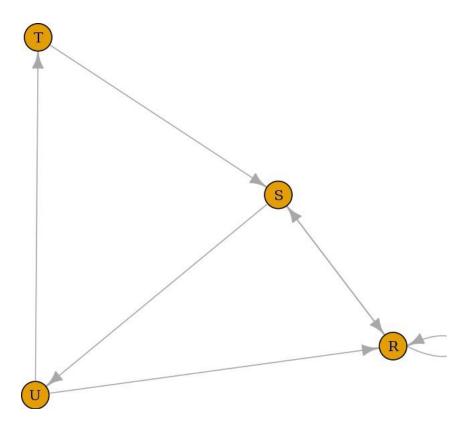

Attaching package: 'igraph'

The following objects are masked from 'package:stats':
    decompose, spectrum

The following object is masked from 'package:base':
    union
```

4.1.1 (i) Length of the shortest path from a given node to another node;

```
[3]: nms <- matt[, 1 ]
matt <- matt[, -1]
colnames(matt) <- rownames(matt) <- nms
matt[is.na(matt)] <- 0
g <- graph.adjacency(matt, weighted=TRUE)
plot(g)</pre>
```

```
[4]: s.paths <- shortest.paths(g, algorithm = "dijkstra")
print(s.paths)

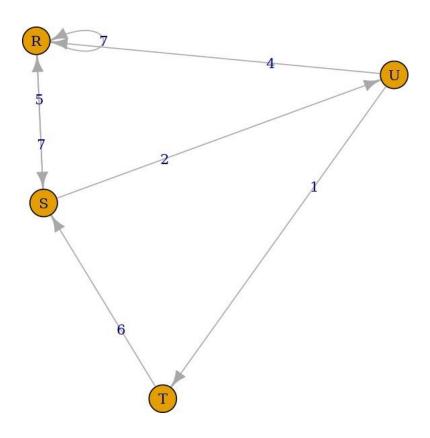

R S T U
R O 5 5 4
```

S 5 0 3 2 T 5 3 0 1

U 4 2 1 0

A matrix: 1×1 of type dbl $\frac{S}{R}$

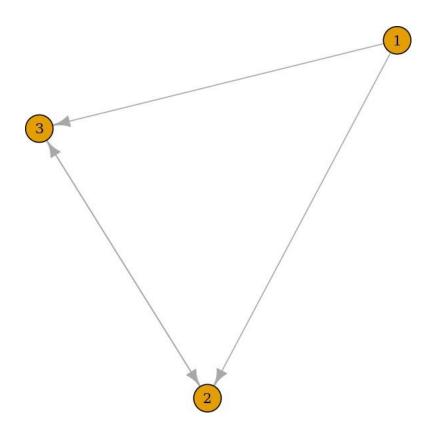

[6]: plot(g, edge.label=E(g) \$weight)

4.1.2 (ii) the density of the graph

```
[7]: dg <- graph. formula(1-+2, 1-+3, 2++3)
plot(dg)
graph. density(dg, loops=TRUE)
```

0.44444444444444

[8]: graph.density(simplify(dg), loops=FALSE)

0.6666666666666667

5 Practical 05

5.1 Aim:

Write a program to distinguish between a network as a matrix, a network as an edge list, and a 1)a network as a sociogram (or "network graph")

[1]: library(igraph)

```
Attaching package: 'igraph'

The following objects are masked from 'package:stats':

decompose, spectrum

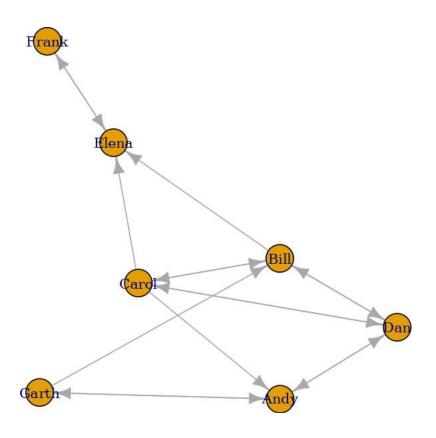

The following object is masked from 'package:base':

union
```

5.1.1 (i) Length of the shortest path from a given node to another node;

```
[2]: ng<-graph.

←formula(Andy++Garth, Garth-+Bill, Bill-+Elena, Elena++Frank, Carol-+Andy, Carol-+Elena, Carol++Dan, Carol++Dan, Carol-+Elena, Carol-+Dan, Carol
```

2) a network as a matrix,

[4]: get. adjacency (ng)

7 x 7 sparse Matrix of class "dgCMatrix" Andy Garth Bill Elena Frank Carol Dan

Andy	1	11								
Garth	1		1							
Bill				1		1	1			
Elena					1					
Frank				1		•				
Carol	1		1	1		•	1			
Dan	1		1			1				

```
iii) a network as an edge list.
[5]: E(ng)
    + 16/16 edges from 9022c9b (vertex names):
     [1] Andy ->Garth Andy ->Dan
                                   Garth->Andy Garth->Bill Bill ->Elena
     [6] Bill ->Carol Bill ->Dan
                                   Elena->Frank Frank->Elena Carol->Andv
    [11] Carol->Bill Carol->Elena Carol->Dan
                                                 Dan ->Andy Dan ->Bill
    [16] Dan ->Carol
[6]: get.adjedgelist(ng, mode="in")
    $Andy
    + 3/16 edges from 9022c9b (vertex names):
    [1] Garth->Andy Carol->Andy Dan ->Andy
    $Garth
    + 1/16 edge from 9022c9b (vertex names):
    [1] Andy->Garth
    $Bill
    + 3/16 edges from 9022c9b (vertex names):
    [1] Garth->Bill Carol->Bill Dan ->Bill
    $Elena
    + 3/16 edges from 9022c9b (vertex names):
    [1] Bill ->Elena Frank->Elena Carol->Elena
    $Frank
    + 1/16 edge from 9022c9b (vertex names):
    [1] Elena->Frank
    $Carol
    + 2/16 edges from 9022c9b (vertex names):
    [1] Bill->Carol Dan ->Carol
    $Dan
    + 3/16 edges from 9022c9b (vertex names):
    [1] Andy ->Dan Bill ->Dan Carol->Dan
```

6 Practical 05

6.1 Aim:

Write a program to distinguish between a network as a matrix, a network as an edge list, and a 1)a network as a sociogram (or "network graph")

```
[1]: install.packages("sna")
   install.packages("network")

Installing package into '/usr/local/lib/R/site-library'
   (as 'lib' is unspecified)

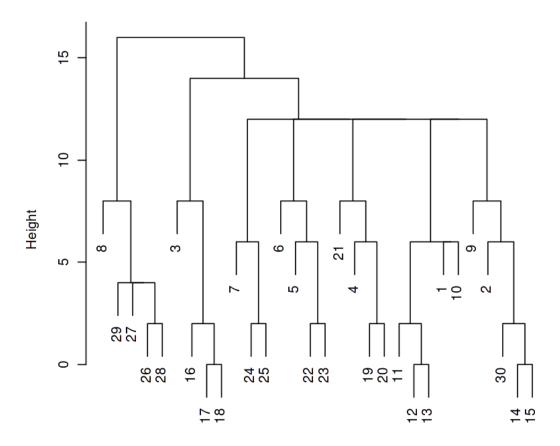

Installing package into '/usr/local/lib/R/site-library'
   (as 'lib' is unspecified)

[4]: library(sna)
   library(igraph)
```

6.1.1 (i) i) structural equivalence

```
[6]: links2 <- read.csv("/kaggle/input/sna-edges/edges1.csv", header=T, row.names=1)
eq<-equiv.clust(links2)
plot(eq)
```

Cluster Dendrogram

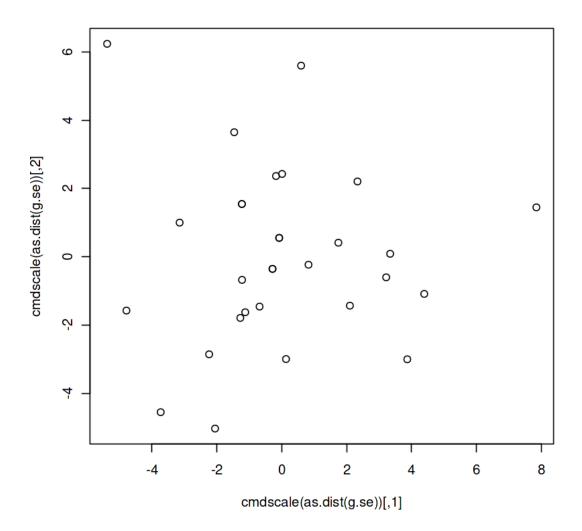

as.dist(equiv.dist) hclust (*, "complete")

6.2 ii) automorphic equivalence,

```
[7]: g. se<-sedist(links2)

#Plot a metric MDS of vertex positions in two dimensions
plot(cmdscale(as.dist(g.se)))
```

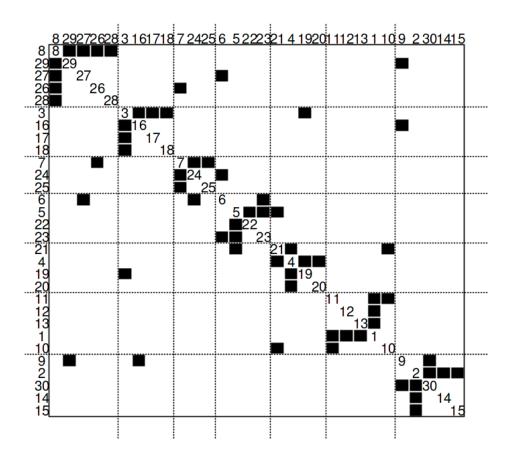

6.3 3) regular equivalence from a network.

Blockmodeling

```
[8]: b<-blockmodel(links2, eq, h=10)
plot(b)
```

Relation - 1

7 Practical 07

7.1 Aim:

 ${\tt Create\ sociograms\ for\ the\ persons-by-persons\ network\ and\ the\ committee-by committee\ network\ for\ a}$

[1]: library(igraph)

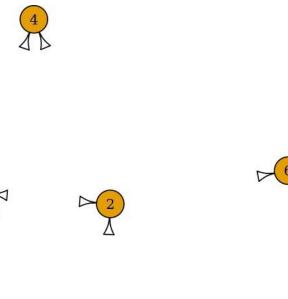

Attaching package: 'igraph'

The following objects are masked from 'package:stats':

```
The following object is masked from 'package:base':
        union
[2]: # Create sample data for data_Network_1
     data_Network_1 <- data.frame(</pre>
       Source = c(1, 1, 2, 2, 2, 2, 2, 3, 3, 3),
       Target = c(2, 3, 1, 3, 4, 5, 6, 2, 4, 5)
     # Create graph object
     g <- graph_from_data_frame(data_Network_1, directed = TRUE)
[3]: # Set binary code for edges to be displayed
     bytes <- "001111111111000000000"
     # Extract edges based on binary code
     edges <- which(strsplit(bytes, "")[[1]] == "1")
     # Get layout for visualization
     layout <- layout with kk(g)
[4]: library(dplyr)
     # Plot sociogram
     plot(g, layout = layout, edge.color = if_else(E(g)$id %in% edges, "red", "gray"))
    Attaching package: 'dplyr'
    The following objects are masked from 'package:igraph':
        as_data_frame, groups, union
    The following objects are masked from 'package:stats':
        filter, lag
    The following objects are masked from 'package:base':
```

decompose, spectrum

intersect, setdiff, setequal, union

[]:

8 Practical 08

8.1 Aim:

Perform SVD analysis of a network.

```
'igraph'
    Attaching package:
    The following objects are masked from 'package:stats':
        decompose, spectrum
    The following object is masked from 'package:base':
        union
0, 0, 0, 0, 1, 1, 1, 0, 0, 0, 0, 0, 0, 0, 0, 0, 1, 1, 1), 9, 4)
[3]: print(a)
           [,1][,2][,3][,4]
